Art. Nr. 89453845-500 (500mA)

Art. Nr. 89453845-500DE (500mA)

Art. Nr. 89453845-700 (700mA)

Art. Nr. 89453845-1000 (1000mA)

common minus connector

Art.Nr. 89453845-350GMDE (350mA)

Art.Nr. 89453845-500GMDE (500mA)

Art. Nr. 89453845-700GM (700mA)

Art. Nr. 89453845-1000GM (1000mA)

DALI-2 2Ch LED-Dimmer CC Control Gear

Overview

- 2 channel DALI LED-Dimmer
- suitable for constant current LED-modules
- **Operating Mode DT6:** individual channel control via 2 DALI addresses
- **Operating Mode Balance&Dim:** control by 2 DALI-addresses, one for adjusting the light level and one for adjusting the channel balance (e.g. colour temperature)
- **Operating Mode Dim2Warm:** one DALI-address for simultaneous adjustment of light level and colour temperature
- **SwitchDim2:** 2 switch-inputs offer control of light level and colour without DALI.
- dimming range 0.1%-100%
- adjustable PWM-frequency (122Hz/244Hz/488Hz/976Hz from FW version 4.6 on changed PWM frequencies: 122Hz/ 250Hz / 500Hz / 1kHz)
- types for constant currents of 350mA, 500mA, 700mA and 1000mA
- types with common plus and common minus connector available
- compact types for integration in luminaires or remote ceiling
- supply voltage from 12V to 48V DC
- output voltage up to 45VDC
- integrated short circuit protection
- low standby power consumption
- high efficiency
- configuration via PC-software DALI-Cockpit and DALI interface (e.g. DALI USB)
- user-friendly factory default settings

[illegible]

The image displays three pedigree charts, each representing a different trait. The first chart, labeled 'LED', shows a family with four children; the first child is affected (shaded square), while the others are unaffected. The second chart, labeled 'Ch2', shows a family with two children, both of whom are affected (shaded squares). The third chart, labeled 'Ch1', shows a family with three children: the first is affected (shaded square), and the second and third are unaffected.

connection plan remote ceiling

Installation

- The DALI 2Ch LED Dimmer is an independent control gear, it is suitable for remote ceiling and integration in luminaires.
- Ensure proper working cable relief for installation in protection class II equipment.
- The wiring should be carried out as a permanent installation in a dry and clean environment.
- Installation may only be carried out in a voltage-free state of the system and by qualified specialists.
- National regulations for setting up electrical systems must be followed.
- Connect the terminals V+ and V- only to a DC supply voltage of category SELV (Safety Extra Low Voltage).
- the connection to the DALI-line (DA,DA) is polarity free .
- If used in Sw&Dim2 mode for both inputs the same phase has to be used.
- The DALI-interface can handle mains voltage, protecting the device in case wrong wiring.
- Wiring topology of the DALI-line: line, tree, star
- Connect only one wire on each terminal, if twin ferrules are used take care to the maximum wire size.
- The DALI wiring can be realised with standard low-voltage installation material. No special cables are required.
- The DALI line may be routed together with the mains voltage (in one cable or as single wires in a tube).

Attention: The DALI-signal is not classified as SELV circuit (Safety Extra Low Voltage). Therefore, the installation regulations for low voltage apply.

The voltage drop on the DALI line must not exceed 2V at maximum length (300m) and maximum bus load (250mA).

Hint:

For highest efficiency the input voltage should range between 3V and 10V above the LED-voltage:

4-6 LEDs: 24V

6-9LEDs: 36V

10-12 LEDS: 48V

Application Example

DALI (common plus connector type)

SwitchDim2 (common plus connector type)

Commissioning

- After connection the 2Ch Dimmer is ready to use. Delivery default settings see page 16.
- The DALI-2 2Ch Dimmer can be addressed with the DALI Cockpit PC Software. When using the [DALI Cockpit Software](#), the PC must be connected to the DALI bus via a suitable interface module ([DALI-2 USB](#), [DALI USB](#), [DALI-2 WLAN](#), [DALI-2 Display](#), [DALI-2 IoT](#), [DALI 4Net](#), [DALI SCI RS232](#)). The DALI Dimmer is automatically recognised by the DALI Cockpit during the addressing process and listed in the device overview.
- Scene values, groups, DALI parameters and device specific settings can be configured in the DALI Cockpit, see section DALI Cockpit: General Settings page 12 and following.

Operating Modes

The device offers several operating modes:

DT6 (factory default)

In this operating mode each channel can be controlled by its own DALI address (Device Type 6). From FW version 4.6 on Lunatone LED Dimmer are DALI 2 compatible and support DALI 2 commands.

SwitchDim2: Alternatively, the device can be controlled using 2 switch-inputs for mains voltage (SwitchDim2):

FW < 6.2:

SW&DIM2-1: light level (both channels)

short press: On/Off

long press: dimming

SW&DIM2-2: scene selector (short press)

scene pre-set see *Table 1* page 16

FW ≥ 6.2:

SW&DIM2-1: light level channel 1

SW&DIM2-2: light level channel 2

short press: On/Off

long press: dimming

Balance&Dim

This operating mode is also suitable for operating tunable white luminaires using two DALI-addresses. The first controls the light level and the second is used for changing the distribution on the output channels (e.g. for tunable white applications or balancing direct/indirect lighting).

The Balance&Dim mode allows colour temperature adjustments without affecting the light level and vice versa. For each channel only DALI-standard commands like dim up/down but also DAP are used. Thus, the device can be used with all common controls and gateways (e.g. KNX). The Balance&Dim mode provides an alternative to the DT8-Tc mode.

Can be operated via DALI or SwitchDim2:

DALI-address 1, SW&DIM2-1: light level

DALI-address 2, SW&DIM2-2: balance

Dim2Warm

Both output channels are controlled by one DALI-address or Sw&Dim2-input. The balance is coupled directly to the DALI dim level – the smaller the dim level the warmer the light.

DALI-address / SW&DIM2-1: Dim2Warm

(Master)

short press: On/Off

long press: dimming

SW&DIM2-2: scene selector

The dim2warm table can be edited in the DALI Cockpit Software – see section DALI Cockpit: General Settings and page 12 (Overview operating mode Dim2Warm).

Selection of operating mode

With the help of the PC-software tool DALI-Cockpit the operating mode can be easily set on the general settings page.

Switching between operating modes can also be done with the help of the DALI-command SET OPERATING MODE (IEC 62386-102 Ed.2). When changing the operating mode the number of used DALI-addresses can change as well and this requires a new addressing procedure. In the DALI-Cockpit this address assignment is performed automatically.

Operating Mode:

Number	Operating Mode
0x0	DT6
0x90	DT6 (factory default)
0x94	Balance&Dim
0x95	Dim2Warm

DALI Cockpit: General Settings

On the overview page respective control elements are available for each operating mode

- **DT6:** 2 sliders, one for the light level of each respective channel
- **Balance&Dim:** 2 sliders, one for level and one for balance,
- **Dim2Warm:** slider for input value adaption and Edit-Function for the Dim2Warm-table.

PWM Frequency

The PWM frequency can be selected:

122Hz / 244Hz / 488Hz / 976Hz.

From FW version 4.6 changed PWM frequencies: 122Hz / 250Hz / 500Hz / 1kHz.

Ignore Broadcast Commands

The broadcast control of each channel can be deactivated individually. Through selection of "Ignore Broadcast", the respective channel does no longer respond to broadcast commands on the DALI bus (group assignments are not ignored).

Adjustable RESET behaviour

From FW 4.6. on the response to a DALI reset command is configurable. The following options are available:

- **Ignore command:** the DALI reset command does not trigger any changes to the device settings.
- **DALI standard:** the selected device settings are reset to the values defined in the DALI standard (see table 1 below - second column: DALI standard values)
- **Custom settings:** the current device settings can be saved. With a DALI Reset command, the selected parameters (6 check boxes) are then reset to these saved values.

Calibration - light adjustment

The dimming range reaches from 0.1% to 100%. From FW version 4.6 on, it is possible to calibrate different light sources, with the option: "LED Calibration".

For each channel, the MIN level (default: 0.1%) an intermediate value (default: 33%) and the MAX level (default: 100%) can be adjusted and matched between light sources.

To do this, the desired level with the upper slider needs to be set. Apply the value and start the fine adjustment by pressing the button next to it. The appropriate fine adjustments can now be made with the calibration slider below. See also Figure 1

DALI Cockpit: Additional Settings

Besides the settings on the general page each channel can be selected separately in the component tree for individual configuration.

For each address the group membership can be set as well as scene values and DALI-parameters. In Balance&Dim operating mode all values assigned to channel 2 are representing the balance.

Figure 2 on page 15 shows settings for each channel for all operating modes: DT6, Balance&Dim and Dim2Warm.

Scene settings

Via the arrow button the scene settings can be imported and exported.

Via the button „Preferences“ the default scene settings can be loaded.

From FW 6.0 on, extended scene settings can be configured. With extended scenes it is possible to automatically change between 2 scene values (once or looped). Thereby enabling configuration of blinking lights, time delayed switch off or light repetitions, as well as traveling lights with multiple dimmers.

Figure 2 Cockpit settings for each channel

Import/Export settings

With a right click on the channel in the device-tree overview the device settings can be exported or imported.

Factory Default Settings

Before the initial addressing is performed, the device can already be controlled by group addresses G0 and G1. This predefined grouping will be deleted during the first addressing procedure. Afterwards groups can be assigned as usual (e.g. with the help of the DALI Cockpit).

By sending a DALI-Reset command the device is set to DALI default values as defined in the standard.

The factory default values as well as the DALI-norm values are summarised in *Table 1* below.

Table 1 factory default settings column 1, DALI Standard settings column 2

	Delivery default			DALI norm
Operating mode	DT6			remains unchanged
SwitchDim2	SW&DIM2-1: light level SW&DIM2-2: scene selector			remains unchanged
Min Level	0.1%			0.1%
Max Level	100%			100%
PowerOn Level	Last light level (= MASK)			100%
System Failure Level	100%			100%
Fade Time	1s [2]			none
Fade Rate	89.4 steps/s [5]			44.7 steps/s
PWM-Frequency	FW < 4.6: 122Hz FW ≥ 4.6: 1kHz FW ≥ 6.2: 250Hz			remains unchanged
Control before initial addressing	G0 – channel 0 G1 – channel 1			None
Scene values	Scene	Ch1	Ch2	All scenes MASK
	0	100%	0%	
	1	0%	100%	
	2	100%	0%	
	3	0%	100%	
	4	100%	0%	
	5	0%	100%	
	6	100%	0%	
	7	0%	100%	
	8	100%	0%	
	9	0%	100%	
	10	100%	0%	
	11	0%	100%	
	12	100%	0%	
	13	0%	100%	
	14	100%	0%	
	15	0%	100%	
Behaviour on DALI RESET command	set DALI Standard values, see column 2			remains unchanged

Purchase Order Information

Art.Nr. 89453845-xxx

DALI 2Ch LED Dimmer CC
constant current xxxmA – 100mA-500mA,
common plus connector,
supply 12V-48V DC,
output voltage range 3V-45V,
back box

Art.Nr. 89453845-xxxDE

DALI 2Ch LED Dimmer CC
constant current xxxmA - 100mA-500mA,
common plus connector,
supply 12V-48V DC,
output voltage range 3V-45V,
SwitchDim2
remote ceiling & integration in luminaires

Art.Nr. 89453845-xxx

DALI 2Ch LED Dimmer CC
constant current xxxmA - 500mA -1000mA,
common plus connector,
supply 12V-48V DC,
output voltage range 3V-45V,
SwitchDim2,
remote ceiling & integration in luminaires

Art.Nr. 89453845-xxxGMDE:

DALI 2Ch LED Dimmer CC
constant current xxxmA - 100mA-500mA,
common minus connector,
supply 12V-48V DC,
output voltage range 3V-45V,
SwitchDim2,
remote ceiling & integration in luminaires

Art.Nr. 89453845-xxxGM:

DALI 2Ch LED Dimmer CC
constant current xxxmA - 500mA -1400mA,
common minus connector,
supply 12V-48V DC,
output voltage range 3V-45V,
SwitchDim2,
remote ceiling & integration in luminaires
